

Electronics

Of course Glide has an electronics program (repair & exchange). Of course we use factory trained technicians for our repairs. But, here's a word of caution: Please call us with your symptoms. Let's work together to make sure that the true cause of your problems are really electronic in nature (instead of something simple like a console cable). Also, many of these units are "serial number sensitive." So, start by giving us a call. Help us help you! Most prices shown below are for EXCHANGES (includes a UPS Call Tag for your return). **Please call for Exchange availability.**

Tech Tips

Electronics in fitness equipment are kind of like light bulbs – you never know when they'll go out on you. Here are some things that will help keep the "lights" on:

- (1) **Keep 'em Clean.** Like any other electronic and mechanical devices, dirt and dust are real killers.
- (2) **Keep It Tight.** Here we're talking about things like connections, strain relief, ground plugs and motor connections.
- (3) **Inspect.** It's very important to periodically inspect the connections to the motor and motor controller. Look for any burnt connections. If you spot anything, call in the techs immediately.
- (4) **Look Out for Abuse.** After decades in the field, we've seen just about everything... including the occasional user who gets upset and decides to punch out a display or kick completely through a motor shroud.
- (5) **Heads Up, Sparky.** If you notice any arcing or sparking coming out from under a motor shroud, you've got a major problem. Motor brushes do more than just wear out. Call us for the inside scoop.
